**The Story of Village Palampur**

**Question 1. Every village in India is surveyed once in ten years during the Census and some of details are presented in the following format. Fill up the following based on information on Palampur.**

- a) LOCATION:
- b) TOTAL AREA OF THE VILLAGE:
- c) LAND USE (in hectares)
- d) FACILITIES:

**Answer :**

- a) LOCATION: Bulandshahar district, Western part of Uttar Pradesh
- b) TOTAL AREA OF THE VILLAGE: 226 hectares
- c) LAND USE (in hectares):

Cultivated Land		Land not available for cultivation (Area covering dwellings, roads, ponds, grazing ground)
Irrigated	Unirrigated	
200 hectares		26 hectares

- d) FACILITIES:

Educational	2 primary schools and 1 high school
Medical	1 primary health centre and 1 private dispensary
Market	Raiganj and Shahpur
Electricity Supply	Most of the houses have electric connections. Electricity powers all the tube wells in the fields and is used in various types of small businesses.
	Well-connected with neighbouring villages and towns. 3 kms from Raiganj. All-weather road connects it to Raiganj and further on to

Communication	Shahpur. Many kinds of transport like bullock carts, tongas, bogeys, motorcycles, jeeps, tractors and trucks are used.
Nearest Town	Shahpur

**Question 2. Modern farming methods require more inputs which are manufactured in industry. Do you agree?**

**Answer :** Yes, modern farming methods require more inputs. For e.g.

(i) More fixed capital: Modern farming methods need tools, machines like tractors, threshers, drilling machines, motors etc.

(ii) More working capital: Modern farming also needs more working capital. It need chemical, fertilizser, pesticides, weedicides, HYVS etc.

All these elements are manufactured in industries. Hence, it would be right to say that modern farming methods make use of a greater number of industrial outputs as compared to traditional farming methods.

**Question 3. How did the spread of electricity help farmers in Palampur?**

**Answer :** The spread of electricity has helped the farmers of Palampur village in the following ways :

- Most of the houses have electric connections, which facilitate them to fulfill the routine needs of lighting.
- Electricity is used to run tubewells in the fields, thereby helping in increaing the area under irrigation
- Electricity is used in various types of small business also.

**Question 4. Is it important to increase the area under irrigation? Why?**

**Answer :** Yes, it is important to increase th area under irrigation because

- Nearly two-thirds of the people are dependent on farming for their livelihood.
- Out of the total cultivated area in the country, a little less than 40 per cent is irrigated.
- In the remaining areas, farming is largely dependent on rainfall which is irregular and uncertain.
- Modern farming methods cannot be used in the absence of assured adequate water supplies.
- India cannot achieve the goal of self-sufficiency in food grains unless the area under irrigation is increased.

**Question 5. Construct a table on the distribution of land among the 450 families of Palampur.**

**Answer :**

Number of families	Land (hectare)
150	0
240	Less than 2
60	More than 2

**Question 6. Why are the wages for farm labourers in Palampur less than minimum wages?**

**Answer :** Farm workers at Palampur village get lower wages than the minimum wages fixed by the government. The minimum wages for a farm labourer is fixed at Rs 115 per day. But farm labourers get only Rs 70 - 80. This happens because of heavy competition for work among the farm labourers at Palampur village.

**Question 7. What are the different ways of increasing production on the same piece of land? Use examples to explain.**

**Answer :** The different ways of increasing production on the same piece of land are:

i) Multiple Cropping : It is the most common way of increasing production on a given piece of land. Under it, more than one crop is grown on the same piece of land during the year.

Indian farmers should grow at least two main crops in a year. In India, some farmers are growing a third crop also over the past 20 years.

ii) Modern Farming Methods : Production on the same piece of land can also be increased by adopting modern farming methods. The Green Revolution in India is a remarkable example of it. Under modern farming, more cultivable areas should be brought under HYV seeds and irrigation. The use of simple wooden plough must be replaced by tractors. The increasing use of farm machinery like tractors, threshers, harvesters, etc. make cultivation faster.

---

**Question 8. Describe the work of a farmer with 1 hectare of land.**

**Answer :** A farmer with 1 hectare of land shall be put under the category of small farmer. Small farmers along with their families cultivate their own fields. Thus, they provide the labour required for farming themselves. Medium and large farmers also hire these abours to work on their fields.

---

**Question 9. How do the medium and large farmers obtain capital for farming? How is it different from the small farmers?**

**Answer :**

- Medium and large farmers usually have higheryield of the farm commodities , through which they are in a better position to genertae surplus cash by selling their farm produce in the open market. Since they have land and house, they easily get loan from banks.
  - Small farmers, on the other hand, may not be able to get bank loans. They have to depend on the local merchant and moneylender for loan.
- 

**Question 10. On what terms did Savita get a loan from Tejpal Singh? Would Savita's condition be different if she could get a loan from the bank at a low rate of interest?**

**Answer :** Savita required money for buying seeds, fertilisers and pesticides, and water for irrigation. She also needed money for repairing her farm instruments. So, she decided to borrow money from Tejpal Singh, a large farmer in her village. Tejpal Singh agreed to give the loan of Rs. 3000 at an interest rate of 24 per cent for four months. He also got her to agree

---

to work on his field during the harvest season for Rs. 35 a day.

Yes, Savita's condition could have been better if she had the awareness to approach a Bank for the necessary loan. The Banks work in an organised way with a pre-disclosed rate of interest , which is cheap as compared to the moneylenders. Further, she could have been able to work more at her farms, instead of working in Tejpal's farms; thereby generating more income.

---

**Question 11. What can be done so that more non-farm production activities can be started in villages?**

**Answer :** The things that need to be done to encourage non-farm production activities in villages:

- i) Provide cheap loans- The government should set up schemes whereby landless labourers and small farmers are able to get cheap loans to start small individual/community businesses.
- ii) Skill Training- In addition to financial assistance, the government should set up rural workshops to enable the villagers to build on their skill levels.
- iii) Develop Inrastructure- The government should also work towards improving the infrastructure of villages so that the rural parts of the country are well connected to the urban areas.
- iv) Awareness- It is imortant for the government to provide training to the youth about the various small and micro organisations that the can start for economic growth.
